SUMMARY

Final-year Information Technology student at Oulu University of Applied Sciences (GPA 4.23) with strong foundations in software engineering, backend and web development, and system-level programming. Hands-on experience building production-style applications using Python, JavaScript/TypeScript, Kotlin, REST APIs, databases, and Linux environments. Strong focus on clean code, testing, debugging, and problem solving, with growing interest in secure software development, cloud platforms, and AI-assisted systems. Highly motivated to learn and contribute to real-world engineering teams.

EDUCATION

Bachelor of Engineering (BEng) in Information Technology

Aug 2023 - July 2026

Oulu University of Applied Sciences, Finland

Current GPA: 4.23 / 5.0

Specialization: Web Development

Relevant studies: Software Engineering, Mobile Development, Cloud Services, IoT Applications, Data Storage & Analysis, Operating Systems, Advanced Web Applications, Applied Mathematics & Physics

PROJECT EXPERIENCE

AI-Assisted Job Application Tracker – Web Application (Software R&D Project)

Jan 2026 – Present

Next.js (App Router) | TypeScript | Gemini API (Simulated) | Tailwind CSS | Recharts | React Context

[GitHub Link](#)

- Designed and implemented a proof-of-concept web application for tracking job applications and analyzing job–resume matching using AI-inspired workflows
- Developed modular frontend and server-side logic using Next.js App Router, including authentication flows, dashboard views, analytics components, and state management
- Implemented simulated AI analysis pipelines to extract skills from job descriptions, compute match scores, identify skill gaps, and generate improvement suggestions
- Focused on code reliability, modular design, and testable components to support future extension

Automated Distribution Warehouse – Robotics & Systems Project

Sep 2025 – Dec 2025

Python | ROS | Universal Robot Arm | GoPiGo | Tello EDU Drone | Web Integration

[GitHub Link](#)

- Designed and implemented a distributed warehouse simulation where drones, cobots, and mobile robots collaborated via software-controlled workflows to fulfill web-based orders
- Developed multi-device communication and automation logic, integrating robotics control, system coordination, and networked processes
- Gained hands-on experience in robotics programming, system integration, and real-world automation concepts through implementation and industry exposure

AstroTrack – Android Application (Software R&D Project)

Mar 2025 – Apr 2025

Kotlin | Jetpack Compose | Firebase | REST API | MVVM

[GitHub Link](#)

- Developed a modular native Android application integrating external REST APIs, secure authentication, and real-time cloud data
- Implemented background processing and scheduled tasks using WorkManager, focusing on reliability and maintainability
- Designed a responsive UI using Jetpack Compose and MVVM architecture, enabling scalable development and clear separation of concerns

OAMKINO – Full-Stack Software Engineering Project

Oct 2024 – Dec 2024

React | Node.js | Express | PostgreSQL | Finnkino API | JWT

GitHub Links: [Client](#) | [Server](#)

- Developed a full-stack software system with secure authentication and modular RESTful backend services
- Integrated external APIs and relational databases, ensuring data integrity and reliable backend logic
- Implemented access control, error handling, and API security following software engineering best practices

Travel Blog Website – Web Software Project

Mar 2024 – May 2024

HTML | CSS | JavaScript | Node.js | Express.js | PostgreSQL

[GitHub Link](#)

- Developed a database-driven web application with user authentication and full content management functionality
- Designed and implemented backend logic, data models, and API endpoints for reliable data handling
- Applied Agile/Scrum practices, version control, and responsive design principles

TECHNICAL SKILLS

- Programming Languages – Python, Java, Kotlin, JavaScript, TypeScript, C (basic)
- Frameworks & Technologies – Next.js, React, Node.js, REST APIs, Android (Jetpack Compose), React Native
- Software Engineering & Backend – Clean and maintainable code, testing & debugging, modular architecture, Agile/Scrum collaboration, technical documentation
- Systems & Tools – Linux, Git, operating systems fundamentals, cloud services
- AI & Data (Exposure) – AI-assisted workflows, data analysis logic, analytics and visualization
- Databases & Data – PostgreSQL, MySQL, data modeling
- Cloud & Development Tools – Firebase, Supabase, VS Code, Android Studio
- Robotics & Automation – ROS, Python scripting, UR robots, GoPiGo, Tello EDU

LANGUAGES

- English (Fluent) Finnish (Intermediate) Sinhalese (Native Speaker)

EXTRACURRICULAR ACTIVITIES

International Tutor 2025-26

Oulu University of Applied Sciences, Oulu, Finland

- Supported incoming international students with orientation, integration, and academic guidance.
- Facilitated intercultural communication and helped students adapt to Finnish student life.
- Organized social and cultural activities to promote community building and well-being.

CERTIFICATIONS

Introducing Generative AI with AWS

[Verified certificate](#)

Udacity (Part of Accenture) – June 29, 2025
